ABOUT

I build backend systems in **Java and Kotlin**. Since June 2026 I have led the Innovation Transformation Department at the **Single Window Center** (State Customs Service of the Kyrgyz Republic).

Since 2023 I have been building government systems people rely on every day: the **103 ambulance service**, customs, import and export permits, and vehicle inspection.

Graduate of Kyrgyz-Turkish Manas University, GPA **3.2 / 4.0**.

3+	10+	1,400+
years building government systems	government systems	commits to public-sector projects

EXPERIENCE

JUN 2026 — PRESENT

Head of Innovation Transformation Department · Single Window Center

I lead the modernization of the national Single Window, where businesses get import and export permits online. I manage the department and write code myself.

- Leading the move from the legacy system to a modern platform where new document types are configured without developers.
- Kyrgyz certificates and declarations are sent automatically to the **shared EAEU registry**.
- Online payments, reports and an interface in three languages: Kyrgyz, Russian and English.
- The new **swis3** platform: document constructor, Flowable BPMN, payments, digital signatures, migration from swis2 — 101 of 110 commits are mine.

Java 21 · Spring Boot · Flowable / BPMN · Axelor · PostgreSQL · GitLab CI/CD

SEP 2025 — MAY 2026

Java Developer · Single Window Center

Built government online services for foreign trade and transport.

- Moved the **vehicle inspection** system to a new platform.
- Public registries of vehicle safety and conformity certificates: anyone can verify a document online.
- QR code document verification service.

Java · Axelor Open Suite · PostgreSQL · S3 · React

JUL 2023 — PRESENT

Java Developer · PetaByte

Building software for government agencies.

- **103 ambulance service**: reports for dispatchers and the senior doctor, crew and vehicle management, links with the 112 line and the Ministry of Emergency Situations.
- **E-License**: electronic licensing, from application to director decision and a public registry.
- **NDP** customs warehouse: QR-paid receipt orders, weighing, sales, reports.
- **Notary system**: digital signature checks, state duty, analytics.

Java · Kotlin · Axelor Open Suite · BIRT · REST

EDUCATION

Kyrgyz-Turkish Manas University

GPA 3.2 / 4.0

SYSTEMS

Single Window · swis3 — The national system where businesses get import and export permits online. I wrote almost all of the new swis3 platform: a document-type constructor, a Flowable BPMN engine, a single application routed across agencies, payments and balances, digital signatures, lab expertise, risk profiles, PDF forms with QR codes, migration from swis2, CI/CD and Docker. (Single Window Center · 2026 · 101 of 110 commits)

EAEU integration — Kyrgyz certificates and declarations are sent automatically to the shared registry of the Eurasian Economic Union. Migrated certificates and declarations from the legacy SWIS. (Single Window Center · 268 commits)

103 ambulance service — Reports for dispatchers and the senior doctor, crew and vehicle management, links with the 112 line and emergency services. (PetaByte)

E-License — Online licence applications: commission review, director decision, acts, re-registration, suspension and termination. Public licence registry with a map, documents generated from Kyrgyz templates. (PetaByte · 2024 · 314 commits)

Customs warehouse & sales (NDP) — Goods batches by declaration number, customs receipt orders (TPO) paid by QR, gross and net weighing, sales and goods movement reports. Roles for agents, operators and customs. (PetaByte · 2024–2025 · 254 commits)

Notary system — Digital signature and certificate serial checks, document stamping, state duty, analytics by region and notary, Kyrgyz name declension. (PetaByte · 2023–2024)

Vehicle inspection — Moved the vehicle inspection system to a new platform, including electronic vehicle passports (EPTS). (Single Window Center · 2025–2026 · 190 commits)

Public registries & QR — Registries of vehicle safety and conformity certificates: anyone can verify a document, including by QR code. (Single Window Center · 67 commits)

SKILLS

Backend: Java 21, Kotlin, Spring Boot, JPA / Hibernate, REST API

Data: PostgreSQL, S3

DevOps: Docker, GitLab CI/CD, DevSecOps

Workflows & ERP: Flowable / BPMN, Axelor Open Suite, BIRT

Integrations: EAEU, 112 & emergency services, Digital signature, QR verification

Frontend: React, TypeScript
